

Supplementary Table 3. Changes in the child-reported Trauma Symptom Checklist for Children scores with time progression

Scale/domain	Initial	After 6 months	After 1 year
Trauma Symptom Checklist for Children (TSCC, child-reported) (N=16)			
Under response	55.63±4.13	47.87±4.72	49.72±4.99
Hyper response	53.87±4.87	48.52±5.19	48.02±5.33
Anxiety	52.30±4.07	51.87±4.53	54.40±4.73
Depression	47.72±3.58	42.27±3.99	47.53±4.17
Anger	46.88±2.87	43.13±3.27	45.26±3.45
PTS symptoms	50.20±2.81	49.69±3.21	46.87±3.39
Dissociation-total	48.70±3.06	47.02±3.30	48.28±3.41
Dissociation-overt	53.73±3.58	50.33±3.93	53.27±4.09
Dissociation-fantasy	38.97±1.30	41.06±1.45	38.91±1.52
Sexual concerns-total	54.45±3.87	52.64±4.48	51.73±4.76
Sexual distress	51.78±3.77	53.05±4.30	50.35±4.53
Sexual preoccupation	68.85±6.64	52.38±7.77	56.17±8.27

TSCC scores were analyzed in 16 children and adolescents ages 8–16 years old. Estimated mean±standard error, by linear mixed model analysis. Analysis was performed including variables of fixed effects (time progression, treatment condition). $p>0.05$ for all domains. PTS, post-traumatic stress
